

# Odin School

## Company Profile

- **Name:** Odin School
- **URL:** <https://www.odinschool.com/>
- **Description:** *OdinSchool is an industry-aligned upskilling platform offering expert-led bootcamps in in-demand fields like Data Science, AI, and Investment Banking. With a strong focus on hands-on projects, real-world applications, and placement support, it connects learners to 600+ hiring partners including top global companies. The programs are designed to bridge the tech skills gap, enabling freshers and professionals to achieve career transitions, upgrades, or launches. Through live training, industry mentorship, and monthly job drives, OdinSchool empowers individuals to become job-ready and excel in competitive markets.*

## Problem Statement:

### 1. HotLead - Sales

#### Background

Your team works at a fast-growing EdTech company that sells career-oriented online programs. Website traffic and lead volume are healthy, but conversions are uneven.

### **Current Challenge**

- 38% of monthly leads never receive a first touch within 6 hours
- Lead-to-paid conversion varies 3–5× by source
- Sales team time is spread thin across low-intent and high-intent leads

### **Data Provided** *(Include this in the case handout)*

- **Lead logs:** Source/UTM, pageviews, device, geography, form fields
- **Outcome labels:** Contacted/Y, Meeting/Y, Enrolled/Y, Lost reason
- **Channel notes:** Average response time, typical objections by source

### **Your Task**

**Diagnose the Problem:** Identify 1–2 reasons why qualified leads are not being prioritized.

**Propose Solutions:** Suggest 2 AI-driven ways to score and prioritize leads with a short reason per lead. Ensure fastest routing for top leads.

**Prioritize & Justify:** Rank solutions by impact vs. effort; include success metrics (e.g., "Target: +15% lead→enrollment in 60 days; median first-touch < 5 min").

---

## **2. CreatorFit - Influencer Marketing**

### **Background**

Influencer spend is significant, but results vary with creator relevance and audience quality.

### **Current Challenge**

- Cost per qualified lead swings from ₹700 to ₹3,200 across creators
- Some placements get views but few enrollments
- Brand safety and topic relevance are inconsistent

### **Data Provided**

- **Creator profiles:** Topics, recent video transcripts, posting cadence, 90-day views
- **Campaign outcomes:** Clicks, leads, qualified, enrollments, refunds
- **Audience notes:** Geography, language, category tags (sampled)

### Your Task

**Diagnose the Problem:** Identify 1–2 core reasons why some creators underperform.

**Propose Solutions:** Suggest 2 AI-driven ways to score fit between creator content and programs, and to forecast views/leads before booking.

**Prioritize & Justify:** Rank solutions; set targets (e.g., “–25% CPL; +20% enrollments from chosen creators in 60 days”).

---

## 3. TrustDesk- Branding

### Background

Comments and reviews influence trust and conversions. Speed and tone matter.

### Current Challenge

- 35% of negative comments receive a reply after 24+ hours
- Repetitive questions consume team time
- Sensitive topics sometimes receive inconsistent responses

### Data Provided

- **Comment/review samples:** Sentiment mix and themes
- **Brand voice guide:** Dos and don'ts, approved claims
- **Outcome markers:** Threads that later led to inquiries/enrollments

### Your Task

**Diagnose the Problem:** Name 1–2 causes of slow or inconsistent replies.

**Propose Solutions:** Suggest 2 AI-based approaches to sort by urgency, draft safe replies, and flag sensitive cases for human approval.

**Prioritize & Justify:** Rank solutions; metrics (e.g., "First reply < 4 hours; convert 30% negatives to neutral/positive").

---

## 4. AdLift - Marketing

### Background

Ad performance is inconsistent across creatives and keywords. Small wins compound into big savings.

### Current Challenge

- CTR ranges from 0.7% to 3.8% on similar audiences
- Cost per qualified lead varies 2–4× by creative
- Creative fatigue detected after ~10 days

### Data Provided

- **Ad history:** Headlines, descriptions, thumbnails, keywords
- **Performance:** Impressions, CTR, CPC, CVR, qualified rate
- **Audience notes:** Segments, placements, exclusions

### Your Task

**Diagnose the Problem:** State 1–2 reasons for weak creatives/keywords.

**Propose Solutions:** Suggest 2 AI-driven ways to generate fresh variants (copy/visual cues/keywords) and rotate winners based on results.

**Prioritize & Justify:** Rank solutions; metrics (e.g., "+25% CTR; –20% CPL-Qualified in 30 days").

---

## 5. ReferMore - Sales

### Background

Referrals are high-quality and low-cost, but most happy learners don't share unless prompted.

### Current Challenge

- Only 6% of satisfied learners refer at least one friend

- Share links exist but messages are generic
- Reward progress is unclear to participants

#### **Data Provided**

- **Engagement markers:** Completion %, feedback, participation
- **Referral logs:** Invites sent, clicks, sign-ups, payouts
- **Message samples:** Past referral prompts and landing copy

#### **Your Task**

**Diagnose the Problem:** Name 1–2 reasons referral momentum is low.

**Propose Solutions:** Suggest 2 AI-driven ways to identify likely referrers and generate simple, personal share messages that feel authentic.

**Prioritize & Justify:** Rank solutions; metrics (e.g., “2× referral leads; payout ROI > 3× in 90 days”).

---

## **6. PriceSense - Product**

### **Background**

Small changes in price presentation and payment plans can shift enrollments and revenue quality.

### **Current Challenge**

- Conversion lifts on certain plans aren’t consistent across audiences
- High-intent segments sometimes choose longer payment plans with higher churn
- Scholarship/discount communication feels unclear to prospects

### **Data Provided**

- **Plan data:** Price points, payment schedules, scholarship rules
- **User segments:** Source, geography, device, prior engagement
- **Outcomes:** Conversion, refunds, default rates by plan

### **Your Task**

**Diagnose the Problem:** Identify 1–2 reasons plan selection isn't optimized by segment.

**Propose Solutions:** Suggest 2 AI-based ways to recommend the best plan presentation and message per segment, without adding friction.

**Prioritize & Justify:** Rank solutions; metrics (e.g., "+8–12% enrollments; –15% refund/default rate in 60 days").

---

## 7. FirstTouch BOT - Sales

### Background

Your team handles thousands of new inquiries each month. Many high-intent leads don't get a first call within the golden window (first 5–15 minutes).

### Current Challenge

- Only 41% of new leads are contacted within 2 hours
- Average connect rate on first attempt: 18%
- Agent capacity is capped; scripting quality varies by person

### Data Provided *(Include this in the handout)*

- **Call logs:** first-attempt time, connect rate, duration, outcomes (qualified/booked/lost)
- **Scripts & disclosures:** identity statement, consent line, common FAQs
- **Scheduling rules:** calling hours, retry cadence, no-call windows
- **Tooling context:** voice AI requirements (STT/TTS + dialog), telephony API, CRM read/write
- **Cost benchmarks:** per-minute call cost range, estimated AI usage cost per conversation, expected monthly volume

### Your Task

**Diagnose the Problem:** Identify 1–2 main reasons why speed-to-lead and connect rates are low.

**Propose Solutions:** Suggest 2 AI-first ways to run first-touch outbound calls that (a) introduce the brand clearly, (b) capture key qualifiers, (c) book a counsellor

slot, and (d) hand off to a human on request or complexity.

**Prioritize & Justify:** Rank your two approaches by impact vs effort; include success metrics (e.g., "Target: 60% leads reached within 15 minutes; +20% qualified bookings; keep cost  $\leq$  ₹X per successful connect").

---

## 8. OneTruth - Marketing Analytics

### Background

Leadership can't make fast decisions because data lives in many places (CRM, analytics, ads, support, telephony, LMS). Different teams show different numbers for the same metric.

### Current Challenge

- Weekly executive reviews take 3–5 hours of manual prep
- "Lead → Enrollment" conversion varies by report (2–4 percentage points)
- Budget shifts lag by 7–10 days after performance changes

### Data Provided *(Include this in the handout)*

- **Systems list & samples:** CRM leads/deals, GA4 events, ad spend & CPL, ticket volumes/CSAT, telephony connect rates, LMS progress (anonymized)
- **Definitions:** Agreed KPI dictionary (lead, qualified, enrollment, refund), attribution notes
- **Decision calendar:** The 3 recurring decisions leaders make each week
- **Tooling context:** Allow reading from multiple sources and producing an auto-generated weekly summary with anomalies + suggested actions
- **Cost benchmarks:** Rough storage/compute ranges; per-run AI summarization cost; expected weekly data volume

### Your Task

**Diagnose the Problem:** Name 1–2 core reasons decisions are slow/inconsistent.

**Propose Solutions:** Suggest **2 AI-first approaches** to (a) unify key metrics into a single version of truth and (b) auto-generate a weekly executive brief with anomalies and "do-next" recommendations.

**Prioritize & Justify:** Rank your approaches by impact vs effort. Include success metrics (e.g., "Cut report prep by 80%; decisions within 48 hours; +10–15% ROI on reallocated spend").

---

## 9. CloseMore - Sales

### Background

Sales/counselling teams handle many conversations (calls, WhatsApp, email). Follow-ups are inconsistent, notes are incomplete, and personalization is low.

### Current Challenge

- 46% of opportunities have no clear next step within 24 hours
- No-show rate for first meetings: 24–28%
- Win rate varies 2–3× by rep, even on similar leads

### Data Provided

- **Conversation samples:** Anonymized call transcripts, WhatsApp threads, email chains
- **Pipeline data:** Stage durations, reasons lost, show-up rates, booking slots
- **Playbooks:** Objection handling, eligibility rules, messaging guardrails
- **Tooling context:** AI to summarize, classify intent/objections, suggest next best action with a short reason; optional reminder nudges; log outcomes back to system of record
- **Cost benchmarks:** Per-minute transcription estimate; per-summary AI cost; monthly conversation volume ranges

### Your Task

**Diagnose the Problem:** Identify 1–2 reasons conversion is being held back.

**Propose Solutions:** Suggest **2 AI-driven ways** to (a) turn conversations into short action notes and (b) produce a daily "next-best-action" list per rep, with smart nudges to reduce no-shows.

**Prioritize & Justify:** Rank approaches; include metrics (e.g., "+15% meetings booked; –20% no-shows; +10–20% win rate in 45 days").

## Things to Keep in Mind

---

### DEPLOY-WEEK: Build. Ship. Impress.

The Ultimate AI Engineering Challenge

---

### THE MISSION

Transform ideas into deployed reality.

You have one week to build something extraordinary.

---

### GOLDEN RULES

#### 1. When in Doubt, Reach Out

- Confused? Document your questions and we'll arrange a call with the company PoC.
- Still stuck? Make logical assumptions and keep moving forward – **momentum is key!**
- **Remember:** The best engineers ask smart questions early.

#### 2. KICKOFF CHECKLIST

Complete these steps to officially enter the arena:

- **Form Your Squad**  
Choose an epic team name that reflects your spirit.
- **Establish Your Base**

Create a Slack channel: `#team-[yourteamname]` in **Misogial** workspace.

Add **Albin** immediately – he's your gateway to the challenge.

- **Set Up Your Arsenal**

Create a **private GitHub repository**.

Add **Albin** as a contributor.

 **Critical:** Repository must be created **after 6th Aug, 7 PM IST**

---

## THE WINNING PLAYBOOK

### **Phase 1: Strategy**

- Break it down: Transform the problem into achievable milestones
- Set deadlines: Create a timeline with buffer for the unexpected
- Design first: Lock in architecture, DB schema, and design early  
(*changing these later = pain!*)

### **Phase 2: Execute**

- Commit early, commit often: Push code regularly
- Branch wisely: Use feature branches for parallel development
- AI is your **co-pilot**, not your pilot: Ensure **you** understand every line
- Document everything: Maintain a comprehensive `README.md`

### **Phase 3: Deploy**

- Ship it! Deploy to a **live server** before demo day
  - Test thoroughly: A working demo > perfect code
  - Prepare for glory: Have your **presentation ready**
- 

## DEPLOY DAY WISDOM

**Battle-tested advice from Deploy-Week veterans**

### 1. MVP > Everything

A tiny thing that works beats a big thing that almost works.

Ship the core, iterate later.

### 2. Pair Programming ≠ Pair Debugging

Rotate who's driving the keyboard to keep perspectives fresh.

### 3. Automate Deploy Early

Set up your Vercel/Render/Railway pipeline on Day 1.

### 4. Design the Demo First

Know exactly what you'll show, then build **only** that.

### 5. Stay Human

- Hydrate: Your brain is 75% water
- Stretch: Your back will thank you
- Sleep: At least one cycle – you pitch better when coherent

*Burnout doesn't impress judges.*

---

## POWER-UP GUIDELINES

### Communication Protocol

- Tag **@Albin** for urgent queries
- Batch your questions for efficiency
- Share daily progress in your team Slack channel

### Technical Excellence

- **Code Quality:** Clean, commented, comprehensible
- **Version Control:** Meaningful commit messages
- **Architecture:** Scalable and maintainable
- **Security:** No hardcoded credentials or exposed keys

## Demo Day Prep

- **Live Demo:** App must be accessible via public URL
  - **Presentation:** 5-minute pitch + 5-minute Q&A
  - **Documentation:** Include setup instructions and architecture diagram
  - **Wow Factor:** What makes your solution unique?
- 

## ADDITIONAL POWER RULES

### Fair Play

- Original work only – cite any external code/resources
- No plagiarism or copying from existing solutions
- Team collaboration is encouraged; inter-team is not

### Resource Guidelines

- Use any programming language/framework
  - Cloud credits available upon request
  - Open-source libraries are welcome
  - AI tools (Cursor, Copilot, etc.) are encouraged
- 

## DELIVERABLES CHECKLIST

- ☐ Deployed application with **public URL**
- ☐ Source code in **GitHub repository**
- ☐ Comprehensive `README.md` with:
  - Setup instructions
  - Architecture overview
  - Technology stack
  - Team contributions

- ☐ **Demo video** (backup for live demo)
  - ☐ **Presentation slides**
- 

## **JUDGING CRITERIA** (*Equal weightage*)

- **Innovation:** Creativity and uniqueness of the solution
  - **Technical Implementation:** Code quality and architecture
  - **Completeness:** Feature completion and polish
  - **Deployment:** Successfully deployed and accessible
  - **Presentation:** Clear communication of your solution
- 

## **EMERGENCY CONTACTS**

- **Technical Issues:** `#deployweek-help`
  - **Albin:** `@Albin` (Slack)
  - **General Queries:** `#deployweek-general`
- 

## **FINAL WORDS**

**Ship Fast. Ship Often. Ship Boldly.**

The clock starts ticking **6th Aug, 7 PM IST.**

**Are you ready to deploy greatness?** 

**Note:** Rules are subject to clarification. When in doubt, ask!

---
